## Education

|                                                                           |                |
|---------------------------------------------------------------------------|----------------|
| <b>International Institute of Professional Studies</b>                    | 2022 – Present |
| <i>M.Tech in Information Tecnology - CGPA: 8.87/10</i>                    | Indore         |
| <b>Sideras International School</b>                                       | 2022           |
| <i>Senior Secondary Certificate (CBSE Class 12th) - Percentage: 89.4%</i> | Indore         |
| <b>Sideras International School</b>                                       | 2020           |
| <i>Secondary School Certificate (CBSE Class 10th) - Percentage: 89.6%</i> | Indore         |

## Technical Skills

**Languages:** Python, Javascript, SQL.  
**Frameworks:** Flask, PyTorch, OpenCV, Numpy, Pandas, Sklearn, Streamlit, LangChain.  
**Tools:** Git, GitHub, Jupyter Notebook, Pycharm .  
**Database:** Oracle, PostgreSQL .  
**Relevant Coursework:** Computer Vision, Statistical Methods in AI, Machine Data and Learning, Probability and Statistics, Data Structures & Algorithms, Distributed Systems, Operating Systems and Networks, Algorithm Analysis and Design, Introduction to Software Systems.  
**OS:** Linux, Windows

## Projects

- KisanSaathi** | *Python, LangChain, Groq, ChromaDB, PyTorch, Streamlit* Jul 2026 – Ongoing
  - \* Designing a multilingual (Hindi/English) agricultural chatbot using a RAG pipeline over a curated crop knowledge base to deliver sowing, irrigation, and crop-selection guidance.
  - \* Building a CNN-based crop disease detection module to identify deficiencies and infections from leaf images(Ongoing).
- Emotion-Based Music Recommender** | *Python, TensorFlow/Keras, OpenCV, Spotipy* Sept 2025 – Nov 2025
  - \* Built a CNN-based facial emotion detection model to classify user mood in real-time using webcam input via OpenCV.
  - \* Integrated the Spotipy API to generate mood-matched song recommendations, mapping detected emotions to curated Spotify playlists.
- YouTube RAG Chatbot** | *Python, LangChain, YouTube Transcript API, FAISS, Streamlit* June 2026 – July 2026
  - \* Built a RAG pipeline using LangChain to enable question-answering over YouTube video content, covering document loading, chunking, embedding generation, similarity-based retrieval, and response generation.
  - \* Fetched video transcripts via the YouTube Transcript API and developed a Streamlit interface allowing users to paste a video link and chat with its content in real time.
- Parkinson's Disease Prediction** | *Python, ML, scikit-learn, Pandas* Jan 2025 – Feb 2025
  - \* Trained and compared SVM and Random Forest classifiers on biomedical voice measurements to predict Parkinson's disease presence.
  - \* Performed data preprocessing and feature analysis in Jupyter Notebook to evaluate model performance across classifiers.
- Cat vs Dog Classifier** | *Python, CNN, TensorFlow/Keras* Nov 2024 - Dec 2024
  - \* Built a convolutional neural network to classify images of cats and dogs,.
  - \* Trained and evaluated the model on a labeled image dataset, tuning hyperparameters to reduce overfitting on Kaggle.

## Certifications

|                                                                                                                |          |
|----------------------------------------------------------------------------------------------------------------|----------|
| <b>3D Vision</b>   <i>Certificate - AcmeGrade &amp; Mood Indigo, IIT Bombay</i>                                | Dec 2023 |
| <b>IoT Based Product Development</b>   <i>Certificate - IIPS DAVV &amp; UPSYS IT &amp; Marketing Solutions</i> | Nov 2024 |
